*Lens thickness is determined primarily by the appropriate choice of frames. We have carefully chosen frames that are compatible with the high powers required for prism spectacles. We **do not recommend** the use of larger frames, 45 eye size or larger, with powers of +10 and above. If a patient's frame is used we may not be able to produce the Rx to your specifications or at a modest price.*

Cylindrical corrections and special powers are available at modest prices. Mid index, high index, and filter (tint) options may be available.

Aspheric Lenticulars & Acrylic Microscopics
